

## CLMS PRODUCT SHEET

### **Distribution and Load Planning:**

The cost of distribution has risen phenomenally due to a number of variables including increased fuel surcharges, stop charges, increased wait time at recipient's docks and increased demand. Distribution cost can be the staple of any organization. This is why controlling freight and optimizing load efficiencies is imperative to your corporation's bottom line. Mismanaged distribution costs can cause profit margins to decrease, thus increasing the potential of lost sales. Celerasys top priority is to ensure that freight is handled at the optimum level of cost effectiveness.

### **CLMS:**

By utilizing our logistics management system we can help assist in ensuring that your cost of distribution is not increased due to incorrect shipments or missed pallets. CLMS is a dynamic planning system aimed at controlling the correctness of shipments in order to reduce inefficiencies. CLMS is used in association with RFID technology to make certain that efficiencies are met.

### **THE BENEFITS OF CLMS:**
